Search Notes

Dear Lucas,

Please find attached the search results for 09/709486. I used the search terms provided by you in your request to complete the search. I searched the standard, Non-Patent Literature (NPL) Dialog files and the Internet.

If you would like a re-focus please let me know.

Thank you

SEARCH REQUEST FORM

Scientific and Technical Information Center

Requester's Full Name Lucas J. Divine Examiner #: 80399 Date: 7/14/05
Art Unit: 2624 Phone Number 27432 Serial Number: 09/709486
Location: Knix 9028 Results Format Preferred (circle): PAPER DISK E-MAIL

If more than one search is submitted, please prioritize searches in order of need.

Please provide a detailed statement of the search topic, and describe as specifically as possible the subject matter to be searched. Include species or structures, keywords, synonyms, acronyms, and registry numbers, and combine with the concept or utility of the invention. De terms that may have a special meaning. Give examples or relevant citations, authors, etc, if known. Please attach a copy of the cover sheet claims, and abstract.

Title of Invention: System, Method and Recordable Medium for uploading documents over a network
Inventors (please provide full names): see PALM

Earliest Priority Filing Date: 11/15/99

For Sequence Searches Only Please include all pertinent information (parent, child, divisional, or issued patent numbers) along with the appropriate number.

ASP Session Object

◀ Previous

Next ▶

The Session object is used to store information about, or change settings for a user session. Variables stored in the Session object hold information about one single user, and are available to all pages in one application.

Examples

Set and return the LCID

This example demonstrates the "LCID" property. This property sets or returns an integer that specifies a location or region. Contents like date, time, and currency will be displayed according to that location or region.

Return the SessionID

This example demonstrates the "SessionID" property. This property returns a unique id for each user. The id is generated by the server.

A session's timeout

This example demonstrates the "Timeout" property. This example sets and returns the timeout (in minutes) for the session.

Session Object

When you are working with an application, you open it, do some changes and then you close it. This is much like a Session. The computer knows who you are. It knows when you start the application and when you end. But on the internet there is one problem: the web server does not know who you are and what you do because the HTTP address doesn't maintain state.

ASP solves this problem by creating a unique cookie for each user. The cookie is sent to the client and it contains information that identifies the user. This interface is called the Session object.

The Session object is used to store information about, or change settings for a user session. Variables stored in the Session object hold information about one single user, and are available to all pages in one application. Common information stored in session variables are name, id, and preferences. The server creates a new Session object for each new user, and destroys the Session object when the session expires.

The Session object's collections, properties, methods, and events are described below:

Collections

Collection	Description
<u>Contents</u>	Contains all the items appended to the session through a script command

StaticObjects	Contains all the objects appended to the session with the HTML <object> tag
-------------------------------	---

Properties

Property	Description
CodePage	Specifies the character set that will be used when displaying dynamic content
LCID	Sets or returns an integer that specifies a location or region. Contents like date, time, and currency will be displayed according to that location or region
SessionID	Returns a unique id for each user. The unique id is generated by the server
Timeout	Sets or returns the timeout period (in minutes) for the Session object in this application

Methods

Method	Description
Abandon	Destroys a user session
Contents.Remove	Deletes an item from the Contents collection
Contents.RemoveAll()	Deletes all items from the Contents collection

Events

Event	Description
Session_OnEnd	Occurs when a session ends
Session_OnStart	Occurs when a session starts

Product SpotlightFarPoint Spread for Web Forms v2

New Version Release! Easily present, edit, and update your ASP.NET data with this high-performance grid/spreadsheet component: MS Excel import/export, cross-sheet formula referencing, client-side scripting events and much more.

Want To Be A Web Master?

If you want to be a Web Master, you will have to host your web site with an ISP (Internet Service Provider).

Founded in 1996 in North Carolina, AIT Inc. provides web hosting and ecommerce services to more than 190,000 domains in 107 countries. Shared, dedicated, and colocated hosting plans for both Linux and Windows users are available along with the industry's most lucrative reseller program. AIT has won acclaim as one of the fastest growing technology companies in North America by Inc. Magazine and by Deloitte & Touche.

As low as \$39.95 per month for Dedicated Hosting! Choose from managed or fully managed options. Plans begin with an 80 GB hard drive and 1 terabyte of data

Build Your Own ASP.NET Website

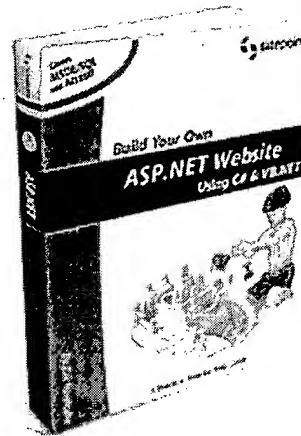

With C# and Visual Basic

Learn how to build impressive ASP.NET Websites in both C# and VB.NET from scratch using freely available software.

Using a step-by-step approach, the author introduces the ASP.NET framework, teaches you about database design, and walks you through obtaining, installing and configuring all the freely available software you need to use ASP.NET.

He then shows you how to build several real world Web-based applications that you can put to use instantly in your projects. All you need to get started is an understanding of HTML and the basics of Website Design.

Title: Active server pages : tricks, traps, myths, and magic

...Abstract: author gives a few pointers, advice for avoiding pitfalls, and explodes a few myths about **Microsoft** 's script based Web application development technology. **Active Server Pages** is a very misunderstood technology. Those who use it rarely understand everything about it, and...

... To a large extent, this has to do with the lack of detailed information about **ASP** outside the dedicated **Microsoft** community, and the relative paucity of documentation on **ASP** beyond the barebones function and method listing in the online help. There are a number of books on the subject, and Web sites dedicated to **ASP** development, but the budding developer often doesn't find out about these until he or...

Title: A database framework with ASP

...Abstract: gained in popularity, these database-generated sites take time to design and set up. While **Microsoft's Active Server Pages (ASP)** have made creating dynamic Web sites much easier, many of the tasks are common to any database application and can therefore be abstracted. Realizing this, I created an **ASP**-based database query system composed of only six pages, called Web2SQL, that can also serve...

... template for building dynamic Web sites. You can use Web2SQL to access and manipulate any **Microsoft** SQL database, with just a few changes, any Open Database Connectivity (ODBC) compatible database.

Title: Programming for active server pages

Abstract: **Microsoft 's Active Server Pages (ASP)** technology is a powerful tool for building Web sites that incorporate dynamic content, such as pages built from databases. It will be particularly beneficial to developers already comfortable with **Microsoft 's Visual Basic**. **Microsoft** presents **ASP** as the server half of an overall Active Platform; the other half-Active Desktop-represents the client side. Both server and desktop use similar technologies: tools; HTML; VBScript and JScript (**Microsoft 's** version of JavaScript); components (ActiveX and Java); and system services (such as component and...

... concern. For example, one doesn't have to use ActiveX controls in the pages that **ASP** serves up.

Identifiers: **Microsoft Active Server Pages ; ...**

A new Window-based computer aided engineering tool - 'ASP' for adaptive signal processing

(Ein neues auf Windows basierendes rechnerunterstuetztes Engineering-Tool :
'ASP' fuer die adaptive Signalverarbeitung)

ABSTRACT:

Adaptive Signal Processing (ASP) software is a new Computer Aided Engineering (CAE) tool for simulating and analyzing the algorithms and structures of adaptive filters. With twenty-one well designed algorithms, ASP covers the complete set of Least-Mean-Square (LMS), gradient lattice LMS, transversal Fast Kalman...

...Sequential Technique (FAEST), and QR rotations including Givens, modified Gram-Schmidt, and Householder RLS. Furthermore, ASP can be easily applied to four application areas: prediction, modeling or identification, array processing including multi-channel and multi-dimensions arrays. ASP is specially designed for PC 386/486/Pentium systems with Microsoft Windows 3.1 or higher.

Microsoft says yest to hosting
US: **MICROSOFT** TO BECOME SERVICE PROVIDER

Steve Ballmer of **Microsoft** says the company is joining the trend of becoming an online application service provider (**ASP**). The company will offer online storage, applications and information and although they do not rule out co-operating with partners, they will become an **ASP** in their own right.
